SUMMARY

Fashion Technology graduate (NIFT Bhubaneswar) running two connected functions for a ₹300 Cr+ heritage saree brand: generative-AI automation and performance marketing. Built and operate an n8n/Claude/Gemini pipeline that generates and publishes product content in production, alongside managing Meta Ads spend to a 3.29x blended ROAS across 18 creatives and owning the Shopify storefront end to end. NIFT training in garment technology and manufacturing QA/QC underpins a working knowledge of the supply chain the automation runs on top of.

SKILLS

AI / LLM: Claude 3.5, Claude Vision, Claude Code CLI, Gemini, GPT-4o, multi-agent orchestration, prompt engineering, LoRA / transfer learning

Automation: n8n (50+ node workflows), REST & GraphQL APIs, webhooks, cron pipelines, Docker, ngrok, Playwright

Performance Marketing: Meta Ads Manager, ROAS optimization, content-type/creative attribution, campaign strategy, retargeting funnels

E-Commerce: Shopify (Admin API, GraphQL, theme/UI), SerpAPI, DataForSEO, GEO/AEO

Development & ML: Python, FastAPI, Flutter, PyQt5, JavaScript, YOLOv8, SQLite

Fashion Technology: QA/QC systems, garment defect classification, manufacturing analytics

Soft Skills

Problem-Solving: root-cause diagnosis, breaking ambiguous operational bottlenecks into buildable systems

Creativity: concept ideation, visual/brand storytelling, campaign and creative direction

Design: UI/UX sense for Shopify storefronts, brand asset and logo direction, layout and visual hierarchy

Coding & Technical Aptitude: reading/writing production automation logic, API integration, debugging multi-step pipelines

Adaptability: operating across marketing, engineering, and manufacturing QA simultaneously

EXPERIENCE

Branding & Marketing Executive — R&D Department — Laxmipati Group, Surat

Jul 2025 – Present | Reports to the Chief Marketing Officer (CMO)

- Serve as decision-maker for laxmipati.com — owning both brand direction and technical architecture (Shopify theme, UI, backend) for the redesigned site.
- Automated the majority of Shopify catalog and content operations through custom n8n/Claude pipelines, removing manual bottlenecks in publishing, SEO, and imagery (see Projects).
- Run Meta Ads performance marketing: ₹6,09,572 lifetime spend across 7 campaigns and 18 creatives, 661 purchases, 3.29x blended ROAS; built content-type attribution analysis identifying Influencer Content (5.66x ROAS) and General UGC (3.12x ROAS, 42.8% of spend) as top performers.
- Led Brand Operations for BER and BUTR, an in-house Laxmipati Group brand, through its 8-month launch (marketing, website build, brand/logo assets).

Project Intern — Marketplace India, Mumbai

Jan 2025 – Apr 2025

- Built an edge AI computer-vision pipeline for real-time fabric-defect QA/QC (see Projects), cutting manual inspection time by ~30%.

PROJECTS

Autonomous Meta Ad Intelligence & Video Creative Pipeline

Tech: n8n, Playwright, Docker, ngrok, LLM prompt chains, AI video generation API

- Problem: SaaS-based competitor ad scraping (Apify) became cost-prohibitive at scale, while creative fatigue drove rising Cost Per Result.
- Built a self-hosted Meta Ads scraper using Playwright/Chromium in Docker, bridged to the cloud n8n orchestrator via ngrok, cutting scraping costs to near zero.
- Used LLMs to reverse-engineer competitor hook lines, CTAs, and emotional drivers into optimized script variations; routed Creative-Head-approved scripts to an AI video API for autonomous ad creative generation.
- Impact: near-zero scraping cost, a continuous creative supply chain, and stabilized CPR by combating audience fatigue.

Autonomous Multi-Channel Cataloging & Programmatic SEO Engine

Tech: n8n, Custom JavaScript, Shopify GraphQL Admin API, LLMs

- Problem: manual keyword research, copywriting, and Shopify data entry caused launch delays and inconsistent SEO during high-volume product drops.
- Built a zero-touch pipeline that extracts high-intent keywords per SKU, generates search-optimized titles and descriptions via LLM prompt chains, and publishes directly through authenticated Shopify productCreate mutations.
- Impact: catalog time-to-market cut from days to seconds; 100% on-page SEO compliance; eliminated manual data-entry errors.

Multi-Modal Legacy Inventory Revitalization Engine

Tech: *n8n, Shopify REST & GraphQL API, LLMs, AI image-to-image generation*

- Problem: thousands of legacy SKUs carried outdated, poor-SEO descriptions and only 2–3 images each; manual audits and reshoots were financially unviable.
- Built a retroactive pipeline that pages through the Shopify REST API, rewrites old descriptions for modern SEO via LLM, and generates new high-resolution image variations via AI image-to-image — updating listings through GraphQL mutations.
- Impact: eliminated reshoot costs across thousands of SKUs and materially improved search visibility and conversion probability on older inventory, in a fraction of the time a dedicated team would need.

Decentralized AI Fabric Defect Detection System — Marketplace India Internship

Tech: *YOLOv8, Flutter, FastAPI, PyQt5, SQLite, ngrok*

- Problem: decentralized production houses lacked standardized defect tracking, and industrial camera rigs were cost-prohibitive across locations.
- Trained a YOLOv8 model on ~35,000 proprietary fabric-defect images; built a Flutter app capturing frames at 4 fps, streamed via ngrok to a one-click desktop host running a FastAPI/SQLite inference backend, with results shown on a real-time PyQt5 dashboard and echoed to the mobile app.
- Impact: full defect traceability to the responsible production house, zero additional hardware CAPEX, and ~30% reduction in manual inspection time.

EDUCATION

B.F.Tech, Fashion Technology

National Institute of Fashion Technology (NIFT), Bhubaneswar • 2021 – 2025

Primary & Secondary Education (CBSE)

BJEM English Medium School, Bhubaneswar

LANGUAGES

English • Hindi • Odia
